	any other inputs to the model	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
b.	The method used and the assumptions made to incorporate the effects of expected early exercise	<p>Expected Option Life: The expected option life is assumed to be mid-way between the option vesting period and contractual term of the option. As per the scheme, the vesting of options is 25% per year and the option term is 10 years from the date of grant. Since the vesting period and contractual term of each tranche is different, the expected life for each tranche will be different. The expected option life is calculated as (Year to Vesting + Contractual Option Term)/2</p>											
c.	how expected volatility was determined, including an explanation of the extent to which expected volatility was based on historical volatility	<p>Volatility: Calculation is based on historical stock prices. Volatility was calculated using standard deviation of daily change in stock price. The historical period taken into account match the expected life of the option</p>											
d.	whether and how any other features of the option grant were incorporated into the measurement of fair value, such as a market condition	<p>Risk Free Rate: Zero coupon sovereign bond yields were utilized with maturity equal to expected term of the option</p>
